Anthelio Launches CodeGenie – An Innovative Physician Documentation Feedback Solution

Dallas, Texas, June 17, 2014 — [Anthelio Healthcare Solutions](#), the largest independent provider of technology and services to hospitals, physician practice groups and other healthcare providers is proud to announce the launch of CodeGenie, the physician documentation feedback solution. CodeGenie is a one of a kind tool that helps providers achieve ICD-10 readiness, physician review, clinical documentation improvement and addresses regulatory mandates.

In February 2014, Anthelio launched a new division within the company – [Health Analytics and Informatics \(HAI\) Division](#). The focus of the division is to develop comprehensive solutions that address predictive and prescriptive analytics for healthcare providers. Over the past several months, the HAI team has been designing a unique product – CodeGenie – which enables coders, clinical documentation specialists and compliance auditors to provide real-time feedback to practitioners in order to meet coding specificity requirements. Other features include real-time code look up, collaboration landing pages so reviewers can see what others have documented and an audit feature to review all feedback collected.

The main focus for physicians is providing quality care to their patients. Anthelio is constantly developing innovative quality patient care solutions. Anthelio recently received [the highest scores in coder quality in KLAS report](#) dated March 2014. “Our global certified coders know and understand that the quality of how they code impacts patient care outcomes,” said [Asif Ahmad](#), CEO Anthelio Healthcare Solutions. “I am excited that CodeGenie aligns patient care continuity by assisting in improving documentation specificity and enabling more accurate coding.”

Other game changing features of CodeGenie include innovative education capabilities which provide meaningful insight to individual providers regarding their documentation improvement opportunities. Another key component of CodeGenie is ensuring accurate reimbursements tying documentation specificity requirements to feedback for accurate code selection.

Though the deadline for ICD-10 compliance has been delayed, it is imperative for providers to be ahead of the curve meeting the various regulatory requirements. CodeGenie will be an invaluable tool for assessing and tracking providers' progress towards ICD-10 readiness. "We've already seen first-hand the benefit that CodeGenie's real time reporting capabilities can afford providers," said Asif Ahmad. "Our goal is to continue designing analytics tools that align with and address the needs of physicians and other healthcare practitioners across the country."
